Frequently Asked Questions

How Do We Work?

At the beginning, we dive into your project – understand your vision, gather all the key information and set goals together. We then start fine-tuning the 3D model, selecting key viewpoints and preparing the first sketches or white renders that define the feel of the final output.

Once we agree on the compositions together, we proceed with detailing the materials, lighting and overall mood of the visualizations.

As standard, we work in two rounds of edits, during which we fine-tune every detail according to your feedback. We finalize only when the result is fine-tuned to the last detail and you are truly satisfied with it.
